

Computer Maintenance

“Let’s get it back to Peak Performance and keep it there”

You need to do some simple maintenance once in a while or you can wait until it’s so slow that you pay someone like me to fix it.

Weekly chores:

- Scan System for malware, after updating.
- Clear Browser Temporary Internet Files.

Monthly chores:

- Empty Recycle Bin.
- Empty Windows Temp folder.
- Empty %temp%
- Empty Prefetch
- Run Scandisk.
- Run Defragmenter.

Full System Virus scan.

STEPS:

1. Empty Recycle Bin
2. Empty entities in C:/Windows/Temp folder
3. Run %temp% and empty entities
4. Run Prefetch and empty entities
5. Clear browser history/cache
6. Uninstall software you don’t use
7. Scan with antivirus
8. Scan for Malware
9. Run Scandisk to check for hard drive errors
10. Defrag hard drive
11. msconfig, and stop background loads
